

The Irish Economic Update:

Another year of good growth in prospect

February 2020

Oliver Mangan
Chief Economist
AIB

Strong growth by Irish economy over 2013-2019

- Very severe recession in Ireland in 2008-2009. GDP fell by 8.5% and GNP down 11%
- Collapse in construction activity and banking system, severe fiscal tightening, high unemployment. Ireland entered a 3 year EU/IMF assistance programme from 2010-2013
- GDP at end of 2008-09 recession was still over 25% higher than in 2001, highlighting that the economic crash came after a long period of very strong growth going back to 1993
- Ireland tackled its problems aggressively in the public finances, banking sector and property market. Imbalances in economy unwound – housing, debt levels, competitiveness, BoP
- Focused on generating growth via its large export base and FDI as the route to recovery
- Domestic economy has recovered strongly, led by rebound in investment and retail spending
- Strong jobs growth. Unemployment rate fell from 16% in early 2012 to below 5% in H2 2019
- Budget deficit eliminated at a quicker than expected pace. Public finances now in surplus
- Major deleveraging by private sector, including households, in past decade
- Balance of payments in surplus

Survey data have weakened, but growth remains solid

AIB Irish Mfg and Services PMIs

Consumer Confidence (ESRI - KBC)

Retail Sales (ex-autos) - Volume, YoY, %

Modified Final Domestic Demand and Employment

Real indicators hold up, despite weaker survey data

- Still strong jobs growth – employment rose by 2.4% yoy in Q3 2019, but slower than in previous years
- Downtrend in unemployment rate continues, as it drops below 5% in H2 2019
- Housing completions up strong 18% yoy to end Q3 2019, though slower growth than in 2018
- Rising housing commencements – up 25% yoy to Sept 2019, close to robust 2018 growth rate
- Mortgage lending growth slowed to 9.5% yoy in 2019 – flattening house prices a factor
- Construction PMI weakened notably in 2019, but returned to expansion territory in December
- Retail sales (ex-motor trade) rose strongly again last year, increasing by 4.3%
- Total car registrations (new + second hand imports) unchanged in 2019 – remained at very high level
- Manufacturing PMI weakened markedly during 2019. Picked up in first month of 2020
- Services PMI slipped in 2019, but has rebounded strongly of late and hit a 7-month high in January
- Consumer confidence fell sharply to 6 year lows in 2019 as Brexit fears weighed, but rose in Nov/Dec
- Good growth of 6.8% in tax receipts in 2019. Budget surplus rose to €1.4bn or 0.4% of GDP

Jobs growth still solid, unemployment rate drops below 5%

Year Average	2016	2017	2018	2019(f)	2020(f)	2021(f)
Unemployment Rate %	8.4	6.8	5.8	5.0	4.8	4.7
Labour Force Growth %	1.9	1.1	1.8	1.8	1.6	1.8
Employment Growth %	3.7	2.9	2.9	2.6	1.8	1.9
Net Migration : Year to April ('000)	16.2	19.8	34.0	34.0	35.0	35.0

Source: CSO and AIB ERU forecasts

Large Irish export base performing very well

- Ireland a very open economy – exports, driven by enormous FDI, equate to well over 100% of GDP
- Major gains in Irish competitiveness earlier in decade – though wage growth now picking up
- Exports rise strongly, helped by large FDI inflows
- Total exports up by 10.4% in 2018, with a further strong rise of 12% yoy in Q1-Q3 2019

FDI and the Irish economy

WHAT ATTRACTS FDI TO IRELAND?

- Access to European markets
- Low corporate tax rate of 12.5%
- English speaking country
- Well educated, flexible workforce
- Common law legal system
- Stable political framework
- Long history of successful FDI
- Access to decision makers

KEY FDI IMPACTS ON THE IRISH ECONOMY

- 1,550 multinational companies now in Ireland
- 33% of MNCs have been here for more than 20 years
- 63% of new MNCs came from US in 2019. Share falling
- €129bn in FDI Exports (68% of total exports)
- 245,000 Jobs in FDI firms (10.5% of total emp.)
- Ten MNCs account for 50% of Corporation Tax
- €14bn Spending on Irish services/materials/capex
- €13.3bn in Payroll

WORLD LEADERS CHOOSE IRELAND

- 17 of the top 20 in ICT
- 10 of the top 10 in Pharmaceuticals
- 14 of the top 15 in Medical Devices
- 8 of the top 10 Industrial Automation
- 10 of the 'top born on the Internet' firms
- 20 of the top 25 Financial Services firms
- UK now less attractive for FDI owing to Brexit

US TAX CHANGES HAVE NOT HIT FDI

- US firms have well established operations here
- Need highly skilled, multi-lingual workforce
- Firms do not move to Ireland to avoid US tax
- Ireland is base to service their European markets
- Easier to operate in local rather than US time zone
- Still wide gap between US & Irish corporate tax rates
- Very strong FDI inflows in both 2018 and 2019

Domestic economy has rebounded strongly

- Construction sees strong recovery since 2013. Output up nearly 12% on average in 2016-18 period
- Slowdown in non-residential construction activity last year – construction output up 4% yoy in Q1-Q3 2019
- Business investment (ex aircraft/intangibles) has picked up strongly since 2013
- However, Brexit uncertainty saw decline in business investment in 2019
- Consumer spending grew by 3.5% on average over 2014-2018 period. Up by 3.4% yoy in Q1-Q3 2019
- Core retail sales rose by a strong 4.3% in 2019
- Total car regs (new + used imports) rose to high levels in 2017-18. Remained at these high levels in 2019
- Modified final domestic demand grew at 4.4% rate in 2014-2018 period. Up 3.5% yoy in Q3 2019

House building on the rise, but still at quite a low level

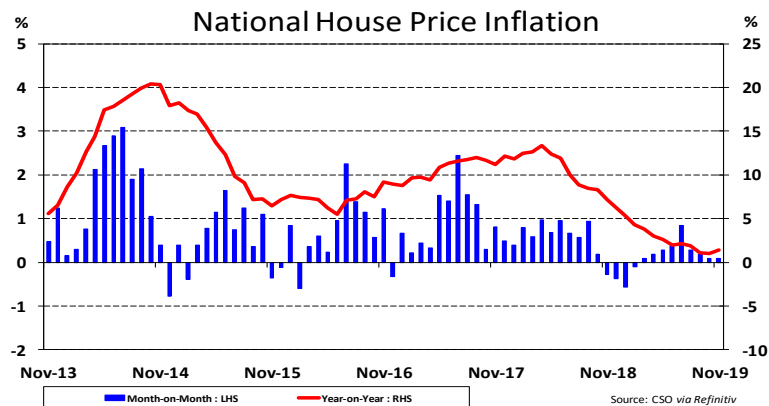

- Housing completions up 18% yoy in Q1-Q3 2019 after rising by 25% to over 18,000 in 2018
- Housing commencements rose 25% yoy to end Q3 2019 following a 28% increase in 2018
- Planning permissions up 23% yoy in Q1-Q3 2019, with 12 month running total now above 34,000
- Measures put in place to boost new house building. More NAMA activity, apartment planning rules relaxed
- Housing output still running well below annual new housing demand, estimated at 35,000 units
- Completions of 21.5k likely for 2019; forecast at circa 25k in 2020
- Mortgage lending growth eases to 9.5% in 2019, though mortgage approvals did pick up over the year
- Affordability broadly stable as earnings growth offsets modest increase in house prices

House price inflation slows sharply

- House prices declined by a very sharp 55% between their peak in late 2007 and early 2013
- House prices have since rebounded as big housing shortage emerged after 90% fall in home building
- Prices up 86% by Nov 2019 from low in March 2013 – Dublin prices up by 95%, non-Dublin rise 84%
- But house prices still some 17% below 2007 peak
- House price inflation slows sharply in 2018/19 reflecting Central Bank rules, though now stabilising
- Prices up 1.4% yoy nationally in November 2019, down from high of 13.3% in April 2018
- Dublin prices fell 0.5% yoy in Nov, down from +13% in Apr '18; non-Dublin slows to 3.6% from 15% last year
- Rents have also rebounded strongly – now 31.6% above previous peak reached in 2008, per CSO data

AIB Model of Estimated Housing Demand

- Rising headship rates added circa 8,000 per year to housing demand in 2002-2011 period
- Shortage of housing, high rents, tighter lending rules saw average household size rise in 2011-16. Thus, headship fell – was a drag of circa 10,000 p.a. on housing demand
- Assume no change in headship in 2016-2020 – note long-term trend is upwards, adding to demand
- Pent-up demand has also built up in recent years from lack of supply
- Thus, forecast table may be under-estimating actual real level of housing demand
- Shortfall in supply met from run down of vacant stock and demand being reduced by fall in headship rate. Both factors very evident in 2011-16 and most likely in 2016-20

Calendar Year	2016	2017	2018	2019	2020
Household Formation	26,500	26,500	26,500	27,500	27,500
<i>of which</i>					
Indigenous Population Growth	18,000	18,500	17,500	16,500	14,500
Migration Flows	8,500	9,500	12,000	13,000	13,000
Headship Change*	0	0	0	0	0
Second Homes	500	500	500	500	500
Replacement of Obsolete Units	5,000	5,000	5,000	5,000	5,000
Estimated Demand	32,000	33,500	35,000	35,000	33,000
Completions	9,900	14,400	18,100	21,500	25,000
Shortfall in Supply	-22,100	-19,100	-16,900	-13,500	-8,000

*Headship is % of population that are heads of households.

Govt debt ratios fall, private sector deleverages

Government finances return to surplus in 2018/19

- Budget deficit declined sharply over last decade. Fell to 0.2% of GDP by 2017
- A small surplus of €170m was recorded in 2018
- Public finances were ahead of target last year – strong tax receipts, rose by 6.8% yoy in 2019
- Budget surplus exceeded target. Rose to €1.4bn or 0.4% of GDP in 2019
- Primary budget surplus (i.e. excluding debt interest) of near 2% of GDP in 2019
- Debt interest costs very low – at 1.4% of GDP
- Budget surplus to rise further in 2020 – Finance Minister wants to get surplus up to 1% of GDP
- Gov Debt/GDP ratio has fallen sharply
- Irish bonds yields negative out to 10 years
- Sovereign debt ratings upgraded in recent years; S&P at AA-, Fitch at A+, Moody's A2 for Ireland

Brexit: Difficult trade talks lie ahead in 2020

- EU and UK agreed on revised Brexit deal at last October's Heads of State Summit
- NI to remain within Single Market for goods and have dual EU-UK customs system
- UK left the EU on Jan 31st 2020 in orderly exit. Transition period to last until end 2020
- UK government rules out extending transition period beyond this date
- Thus, EU-UK talks on future trade relationship will need to be completed by end 2020
- Negotiations likely to prove difficult and fractious. EU doubts can be done by end 2020
- EU insisting on level playing field, with considerable regulatory alignment
- UK government puts focus on 'taking back control' and non-alignment with EU
- Much uncertainty about outcome of talks, which will determine final shape of Brexit
- UK could opt for no deal rather than have close alignment with EU rules
- This would see UK fall back on WTO rules from 2021- i.e. effectively a hard Brexit

Brexit expected to lower growth rate of Irish economy

- **Multiple hits to the Irish economy if there is a no EU-UK Trade deal** at end of transition period: further collapse in sterling, recession in UK, disruption to trade/supply lines, tariffs, new administration and regulatory costs etc
 - Sharp fall-off in trade with UK likely if there is no trade deal, with the **shock front loaded** - around half of the impact on trade would take place in the first two years, per ESRI
 - In a '**disorderly no deal**' scenario, ESRI estimates that GDP would be **5% lower** after 10 years. Unemployment rate would be 2 percentage points higher
 - **Central Bank** say a disorderly hard Brexit could reduce Irish growth by 4% in first year and 6% in long run
- **Copenhagen Economics** considered costs of regulatory divergence for goods and services and of border checks, as well as tariffs in assessing impact of various trade deal scenarios
 - Estimates impact by 2030 is to **reduce Irish GDP** by 2.8% under a EEA scenario, **by 4.3% in a standard FTA, but 3.5% in enhanced FTA** with closer regulatory alignment
 - CE estimate GDP 7% lower in a WTO (no trade deal) scenario

Agri. sector would be severely impacted if no trade deal

- Main EU tariffs relate to food products, keeping prices high. UK may impose tariffs on all food imports if no trade deal
- Food and Beverages account for 25% of total Irish exports to UK
- Around 40% of Irish food exports go to the UK – key market for beef and cheese
- Other sectors very dependent on UK market include machinery and transport, metal products, textiles
- Some 40% of indigenous Irish exports go to UK compared to 10% for foreign owned firms

Share of Exports by Industry Destined for the UK (ESRI)

AIB Brexit Sentiment Index – Q3 2019

- A total of **700 SME's (with up to 250 employees)** across the island of Ireland

Source: Ipsos MRBI

*The Index reflects and measures the sentiment of Irish SMEs in the Republic of Ireland and Northern Ireland towards Brexit, summarised as a single number, with a potential range from +100 to -100. It takes the difference between the positive and negative responses across four key measures: Impact on business now, Impact on future business (next 5 years), Level of visibility and, finally, the Wider economic impact of Brexit.

- **Headline index weak again in Q3.** One of the most notable features of the survey this year is the number of firms that say **Brexit is having a negative impact on their business**
- **Manufacturing, Food & Drink, Transport, Tourism and Retail sectors most concerned** about Brexit
- **50% of ROI and 66% of NI firms who had investment plans say they have been cancelled or postponed** owing to Brexit.
- **Big jump in expectations of a hard Brexit to 59% in ROI and 32% in NI**

Good Irish growth can continue if external risks avoided

- Irish economy should continue to grow at impressive pace, but not as strongly as in recent years
- House building picking up from still low output levels
- Public spending on the rise
- Activity supported by low interest rate environment
- Strong growth in household incomes
- Continuing good inflows of FDI
- Irish inflation still very low
- However, Brexit remains real challenge for economy
- Important too that global economy avoids recession
- GDP growth forecast at 4% in 2020 & 3% in 2021, assuming EU-UK trade deal & no global recession
- ESRI had estimated medium-term growth rate of economy at around 3.25% for the period 2020-2025. Will now be lower post 2020, with UK out of EU

AIB Irish Economic Forecasts

<i>% change in real terms unless stated</i>	2017	2018	2019 (e)	2020 (f)	2021 (f)
GDP	8.1	8.2	5.5	4.0	3.0
GNP	5.1	6.5	3.0	3.7	2.75
Personal Consumption	3.0	3.4	3.5	3.0	2.5
Government Spending	3.9	4.4	4.0	3.0	3.0
Fixed Investment	-6.6	-21.1	48.0	5.0	5.0
Core Fixed Investment*	4.0	13.0	2.0	5.0	5.0
Exports	9.2	10.4	11.0	7.5	5.0
Imports	1.1	-2.9	24.0	8.0	5.5
HICP Inflation (%)	0.3	0.7	0.9	1.1	1.3
Unemployment Rate (%)	6.8	5.8	5.0	4.8	4.7
Budget Balance (% GDP)	-0.2	0.1	0.4	0.7	1.0
Gross General Gov Debt (% GDP)	68.0	63.5	59.3	55.5	55.0

*Excludes investment in aircraft and intangibles

Source: CSO, D/Finance; AIB ERU Forecasts

Risks to the Irish economy

- Main near-term risks to the Irish economy are external
- Brexit still a big concern for Ireland given uncertainty about future EU-UK trading relationship
- Weaker external environment, with downside risks to global growth from increasing protectionism/tariffs, declining world trade/manufacturing activity, weak European economy
- Questions around Ireland's corporation tax regime (Apple ruling, moves on tax harmonisation in EU, cuts in US/UK rates, OECD tax reform/minimum tax rate proposals) could impact FDI
- Supply constraints in new house building activity, which is recovering at a slow pace with output still at low levels
- Competitiveness issues - high Dublin house prices, high rents, high personal taxes, rising wages
- Credit constraints – tightening of lending rules, still deleveraging, weak credit demand
