

# The Irish Economic Update:

*Strong summer rebound, with full re-opening of the economy this autumn*

September 2021

Oliver Mangan  
Chief Economist  
AIB

# Lockdown saw domestic economy contract again in Q1

- GDP grew by 5.9% in 2020, with GNP up 3.4%
- Modified final domestic demand fell by 4.9% and modified gross national income fell 3.5% in 2020
- Consumer spending down 10.4% in 2020, fixed investment 3.6%, but 10.9% rise in gov. spending
- Third lockdown in Q1 2021 saw GNP contract by 3.1% with a 3.5% fall in modified final domestic demand
- Consumer spending fell by 5.9% in Q1, leaving it 11.8% below year earlier levels
- Domestic fixed investment rose by 1.7% in Q1, and was down just 2.1% yoy
- Construction output fell 27.9% in Q1, down 31.6% yoy, with housing completions falling by 20% yoy
- Transport & Hospitality saw a further 4.6% output decline in Q1, leaving it 18% down yoy

# Very strong rebound in activity as restrictions are eased

- Restrictions started being lifted during Q2 after long third lockdown imposed in Q1
- Indicators point to very strong rebound in activity in Q2 and Q3 after lockdown ended
- Mfg PMI hit record high of 64.1 in May, at 64.0 in June and 63.3 in July
- Services PMI jumped to twenty year high of 66.6 in July, third month in a row above 60
- Construction PMI soared in May to 66.4 and at 65.0 in June and 62.8 in July
- Strong pick-up of 10% in core retail sales in Q2. New car sales rose by over 20% yoy in H1'21
- Tax receipts running ahead of target by 3.4% at end July – and up 13% year-to-date
- Number on PUP falls sharply to below 150,000 in August from a peak of 485,000 in Q1
- Prospects of strong growth in 2021 and 2022, with economy fully re-opening this autumn
- GDP growth forecast at between 7% and 11% in 2021 and projected at 5% to 7% for 2022
- Inflation accelerating; rises to 2.2% in July from -1.5% last autumn. Could hit 3.5% later in year
- Spike to prove temporary. HICP forecast to fall back below 2% next year, average 1.5% in 2023

# Indicators pick up strongly after weak start to 2021

AIB Irish Mfg and Services PMIs

Ulster Bank Construction PMI

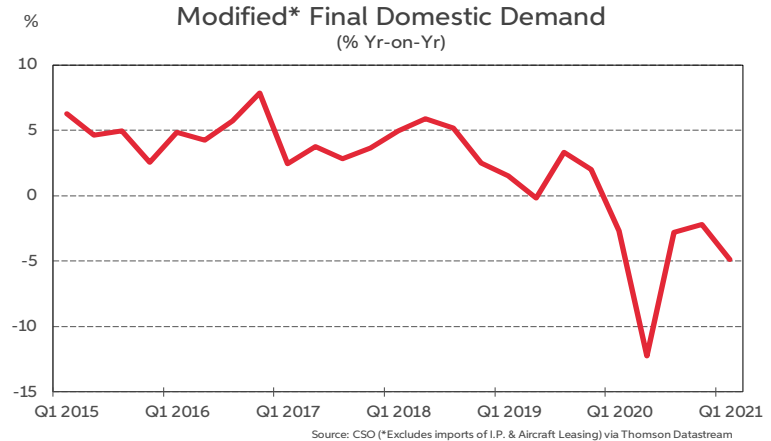

Consumer Confidence (ESRI - KBC)

Retail Sales (ex-autos) - Volume, YoY

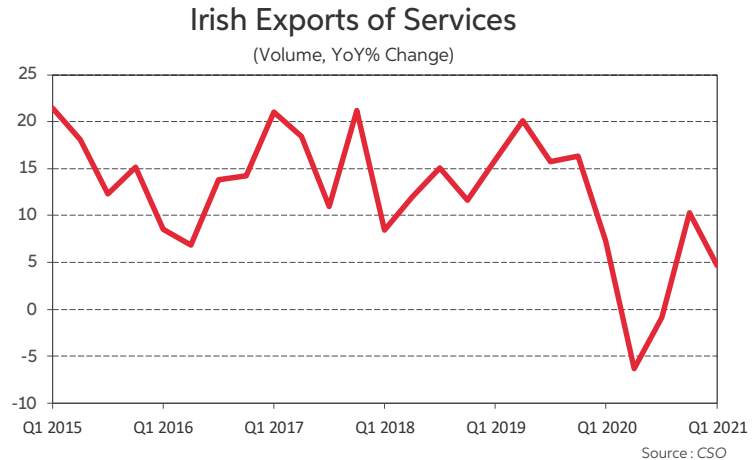

# Unemployment declining, inflation on the rise

# Exports perform very strongly throughout the pandemic

- Ireland a very open economy – exports, driven by large scale FDI, are a huge part of economy
- Exports rise strongly in recent years, helped by large FDI inflows
- Pharma, medical care products, IT equipment, and food & drink are main goods exports
- IT, business, financial and tourism are the main service exports
- Total exports rose by 9.5% in 2020 and were up 14.4% yoy in Q1 2021
- Goods exports up 16.5% in 2020 and 22.4% yoy in Q1'21, fuelled by very big jump in pharma
- Service exports rose by 2.6% in 2020 and were up 4.7% yoy in Q1 2021
- Collapse in earnings from tourism & travel, but computer service exports show strong growth

# House building holds up, while commencements rebound

- Total completions amounted to 20,535 in 2020, just 2.6% down on 2019 level despite a 6-week lockdown
- Big jump in planning permissions in past couple of years
- Commencements fell by over 17% to 21,700 in 2020
- Further sharp fall in commencements in Q1'21, but they surged in Q2 as house building sector reopened
- Commencements jump to 27,250 for 12 months to June
- Smaller than expected fall in completions in Q1 2021 and rebound strongly in Q2. Up 9.7% yoy in H1 2021
- Completions likely to be circa 20,000 again in 2021 and should pick up considerably in 2022-23
- Mortgage lending fell by 12% to €8.4bn in 2020
- However, mortgage lending rose over 25% yoy in H1'21
- Forecasts are for a €10bn+ mortgage market in 2021
- Housing affordability stable - both prices & wages rise

# House prices on marked upward trend

- House prices declined sharply, by 55% over 2007-13
- Prices have since recovered strongly; 95.5% above trough by June 2021, but still 12.3% below 2007 peak
- CSO data show house prices little changed over 2019-20, until starting to move higher in Q4 last year
- Strong rises in house prices in H1 2021, with yoy rate accelerating to 6.9% by June
- Non-Dublin prices up 7.4% yoy in June, above Dublin rate of 6.4% yoy - prices rising strongly everywhere
- Property websites show big jump in asking prices since mid-2020. Running at 12.7% yoy in Q2 2021
- Low supply, remote working, strong public/institutional demand, enhanced help-to-buy scheme, rising personal savings, pent-up demand are all supporting house prices
- Rents recover after declining last year. Annual rate running at 3% by June/July 2021

# AIB Model of Estimated Housing Demand

- Rising headship rates added circa 8,000 per year to housing demand in 2002-2011 period
- Shortage of housing, high rents, tighter lending rules saw average household size rise in 2011-16. Thus, headship fell – was a drag of circa 10,000 p.a. on housing demand
- Assume no change in headship in 2016-2021 – note long-term trend is upwards, adding to demand
- Pent-up demand has also built up in recent years from lack of supply
- Thus, forecast table may be under-estimating actual real level of housing demand
- Shortfall in supply met from run down of vacant stock and demand being reduced by fall in headship rate. Both factors very evident in 2011-16 and most likely in 2016-21

Calendar Year	2017	2018	2019	2020	2021
<b>Household Formation</b>	28,000	32,000	31,000	25,000	25,000
<i>of which</i>					
<b>Indigenous Population Growth</b>	18,500	21,000	21,000	17,500	16,000
<b>Migration Flows</b>	9,500	11,000	10,000	7,500	9,000
<b>Headship Change*</b>	0	0	0	0	0
<b>Second Homes</b>	500	500	500	500	500
<b>Replacement of Obsolete Units</b>	5,000	5,000	5,000	5,000	5,000
<b>Estimated Demand</b>	<b>33,500</b>	<b>37,500</b>	<b>36,500</b>	<b>30,500</b>	<b>30,500</b>
<b>Completions</b>	<b>14,400</b>	<b>18,100</b>	<b>21,100</b>	<b>20,700</b>	<b>20,000</b>
<b>Shortfall in Supply</b>	<b>-19,100</b>	<b>-19,400</b>	<b>-15,400</b>	<b>-9,800</b>	<b>-10,500</b>

\*Headship is % of population that are heads of households.

### Government Debt Ratios (%)

Sources: Dept of Finance, CSO, AIB ERU (Inflated/Distorted GDP figures from 2015)

# Big 2020-21 budget deficits to decline sharply in 2022-23

- Budget deficit fell sharply in last decade, with small surpluses recorded in 2018 and 2019
- However, Covid-19 and efforts to mitigate it saw the public finances deteriorate during 2020
- General Government budget deficit of €18.4bn in 2020, or 5% of GDP
- Strong rebound in tax receipts in 2021 – up 13% year-to-date at end July
- Dept. of Finance forecasting another large deficit of circa €20bn in 2021, or 5% of GDP
- Deficit forecast to fall to 3.4% in 2022 and 1.8% in 2023 as Covid supports end & economy recovers
- Gov. Debt ratios had fallen in last decade, but move higher in 2020 and 2021
- Bond yields low and stable despite big jump in budget deficit and large rise in debt issuance
- Ireland's sovereign debt ratings hold steady; S&P at AA-, Fitch at A+, Moody's A2

# Economy was in very strong shape ahead of Covid shock

- Economy was in very strong shape ahead of being hit by very deep 2020 Covid recession
- Well balanced, robust underlying growth of circa 5% per annum over 2013-19 period
- Large inflows of FDI and strong export growth remain key features of the economy
- Strong jobs growth, averaging over 3% per annum during the period 2013-19
- Unemployment rate fell from 16% in early 2012 to below 5% in H2 2019
- Budget deficit eliminated quicker than expected. Public finances in surplus in 2018/19
- Major deleveraging by private sector, including households, during the past decade
- Sound financial system, with well capitalised banks
- Stable housing market - moderate growth in mortgage market and house prices pre-Covid
- Very low, stable CPI inflation of below 1% over 2013-19 period
- Balance of payments returned to large surplus

# Elements in place for return to strong Irish economic growth

- Key ingredients in place for a strong rebound by Irish economy from 2021 onwards
- Rollout of vaccines allows economies to reopen here and elsewhere – very high Irish vaccination rates
- World economy rebounding strongly, which augurs well for export orientated countries like Ireland
- House building to pick up in coming years from still low output levels – big focus of government policy
- Fiscal policy can remain supportive of growth -DoF forecasts provide for increased core spending
- Activity aided by continuing very low interest rates
- Economy has deleveraged; low private sector debt
- Large build-up in private savings in 2020-H1'21 will help fuel strong growth in domestic spending
- Strong growth forecast for 2021-22, though wide range for GDP projections

OECD GDP Forecasts (June 2021)			
% Vol	2020	2021	2022
World	-3.5	5.8	4.4

# Brexit: The EU-UK Trade & Cooperation Agreement

## The Trade Deal:

- EU and UK finally agreed on a trade deal before end 2020, thereby allow for continuing tariff-free and quota-free trade in goods
- However, the FTA is much inferior to the EU Single Market, involves a lot of extra admin costs and delays at ports – it marks an end to frictionless UK-EU trade
- The FTA is unique in that it increases trade barriers– new customs procedures, compliance with onerous rules of origin requirements, documentary evidence needed to move goods
- Agri-food products may require export health certs and veterinary inspections at borders
- FTA does not extend to services. Financial services not given equivalence/passporting rights

## The Fall-Out:

- Irish PMI surveys show firms reporting considerable import delays at ports, with longer supply chains and higher admin costs as a result of Brexit
- Estimated that higher trade costs will knock circa 0.5% off UK/RoI annual GDP growth rate in next few years
- UK not fully implementing all customs checks until 2022 when Irish exporters to GB will see impact
- Issues with NI protocol and GB-NI trade flows – Customs declarations, regulatory checks, political impact

# Ireland's 12.5% Corporate Tax regime at risk

## Importance of FDI:

- Some 1,600 multinational companies are based in Ireland, accounting for over 250,000 in direct employment or about 18% of total jobs in terms of direct and indirect employment.
- Corporation tax accounts for €12bn or circa 20% of total tax revenue... 80% of this comes from MNCs

## Threats to Ireland's Corporate Tax Regime:

- Ireland's relatively low & stable 12.5% corporate tax rate has been viewed as key cornerstone in attracting FDI
- OECD has moved to introduce a minimum global corporate tax rate. This is being supported by most countries, who have agreed to a minimum rate of 15%. Ireland seeks further clarification and discussion on matter
- President Biden initially proposed 21% global minimum tax rate for US companies, up from the current 10.5%. He may instead now move in line with OECD and opt for a 15% rate
- OECD also agrees on other tax changes whereby larger multinationals, mainly digital, would pay some taxes on profits in countries where they make sales, rather than where they are based- to apply to 20% of their sales

## Major Uncertainties Remain:

- DoF has allowed for a €2bn hit to Irish corporation tax receipts by 2025 from changes to global tax system
- Uncertainty remains as (1) still unclear what minimum US global rate will be – needs to be approved by Congress (2) Ireland seeking clarity that proposed minimum 15% global corporate tax will not be any higher (3) unclear what sectors/companies the digital tax on 20% of sales will apply (4) No indication on when changes would take effect
- Irish government holding out at present on moving from 12.5% corporate tax rate given all these uncertainties

# Ireland has other advantages besides low tax rate

## Ireland will remain attractive FDI location:

- Big multinationals will still need to retain large global operations, whatever happens in the tax field
- US companies require employees with language skills to service European customers in European time zone
- English speaking country with common law system remains key attraction of Ireland for US companies
- Ireland's main competitor for FDI has been UK, but it is now out of EU, Single Market & Customs Union
- Strong talent pool of internationally mobile, highly skilled, well educated workers (17% of workforce is non-Irish)
- Key industries have large presence in Ireland, with its strong pro-enterprise culture, leading R&D and innovation

## Change is coming, but FDI inflows continue:

- Irish Finance Minister has conceded that a “period of significant change is coming”
- Could see agreement on new global corporate tax regime reached later this year, but ratification is not guaranteed
- Tax changes usually phased in after a number of years
- Big rises in corporate tax rates in the pipeline for major economies (proposal to raise US rate from 21% to 28%; UK going from 19% to 25% in 2023). Thus, even if it is raised, Ireland's rate will likely remain comparatively low
- Strong inflow of FDI continues in 2021 (Intel, Stripe) despite moves to change global corporate tax rules

# Reprise of risks to the Irish economy

- Main near term risk is still Covid-19 – concerns about new variants
- Virus could leave lasting scarring effects – high business failures & bad debts, job losses
- Very open nature of Irish economy means it is exposed to any weakening in global economy
- Changed EU-UK trading relationship may yet negatively impact some Irish industries
- Questions around Ireland’s corporation tax regime (pressure for tax harmonisation in EU, OECD digital tax/minimum tax rate proposals, changes to US overseas corporate tax rate)
- Supply constraints in new house building activity, with output still at very low levels
- Competitiveness issues - high house prices, high rents, high personal taxes, high wages
- Credit constrained – tight lending rules, on-going deleveraging, weak credit demand
